Proposed overcast shade covering 100% of the playground area. This will be achieved through a combination of large shade sails and pergolas. The shade sails will be made of a durable, weather-resistant material and will be supported by a sturdy metal frame. The pergolas will be made of a similar material and will have a slatted roof that allows for natural light to filter through. The shade will be installed in a way that provides maximum coverage while still allowing for good ventilation and airflow. The shade will be installed in a way that provides maximum coverage while still allowing for good ventilation and airflow.
